

# K175

ON-EAR, CLOSED-BACK, FOLDABLE STUDIO HEADPHONES

**AKG**<sup>®</sup>  
by HARMAN

## HIGHLIGHTS ■

### **Professional 40mm Drivers**

Large 40 mm transducers for greater low-frequency extension

### **Superior Sensitivity and Low Impedance**

Provides maximum output with a broad range of playback devices

### **Foldable, Ergonomic design**

Allows you to take studio-quality sound with you—fitting right into your backpack or computer bag

### **Durable all-metal hinge**

Durable all-metal hinge designed to last for years

### **Slow-retention foam ear pads**

Ensure a comfortable, secure fit that also maximizes acoustic isolation

The on-ear, closed back AKG K175 are perfect for live monitoring and mix applications. Just pick them up and you'll immediately find the roadworthy design takes away the worry of damage while traveling. Try them on and you'll realize they still provide the superior studio quality sound you expect from AKG. And you'll never get tired of wearing AKG Foldable Studio Headphones because their ergonomic design provides a comfortable fit—even during long sessions.

As the gold standard of professional-quality sound with over one million studio headphones sold, AKG knows what it takes to build world-class headphones—high-quality, durable parts working together to match amazing sonic performance with optimal fit and comfort.

## KEY MESSAGES ■

### **LEGENDARY AKG SONIC PERFORMANCE**

Building on a 70-year legacy of continual design innovation, AKG delivers unmatched sound quality and comfort in this new family of foldable studio headphones. The new K175 represents the culmination of decades of refinement—from the transducers, to the porting, to the fit and finish.

### **YOU CAN TAKE HEADPHONES OUT OF THE STUDIO ...**

...but you can't take the studio out of these headphones. As the most trusted name in studio headphones, AKG has sold over one million pairs of K240 series alone and now it's even more convenient to take studio-quality quality sound with you. With the K175, it's almost as if you were sitting in front of a pair of great reference monitors—transparent, defined, and uncolored.

### **YOU'VE NEVER HEARD BASS LIKE THIS**

When you're serious about editing and mixing your music, you're looking for more than thumping bass in your headphones, you need nuanced low frequencies. The K175 offers 40mm transducers—the largest in their class—to create greater low-frequency extension and detailed bass reproduction. This makes it easy to define each and every instrument you're hearing.

### **BUILT TO LAST**

After decades of the strictest product standards and most rigorous of testing regimens, quality has become synonymous with the AKG name—and these headphones are no exception. From intensive driver stress tests, to an 80,000-bend-cycle for cables—even an exaggerated drop test—we put our headphone designs through the gauntlet, so you can count on them for years to come. All of the critical pieces are metal, including the hinge, guaranteeing they last through heavy use. Additionally, the cable is replaceable, further extending the life of your investment.

### **TAKE THE STUDIO WITH YOU**

With a completely foldable design, made possible through an innovative, three-axis hinge, the K175 can easily be collapsed and transported in tight spaces, like a travel bag. The design minimizes the exposure to damage that comes with the demanding mobile lifestyles of musicians, producers, and audio engineers.

### **MAKE MUSIC IN COMFORT**

No more tugging or pulling to adjust the fit of your headphones. The AKG K175 are the first foldable, studio-quality headphones in their class to offer a self-adjusting headband, floating ear cups, and an innovative three-axis hinge to provide you an instant, all-over perfect fit with every use.
